

## RUST RIP - Rust Remover & Phosphatizer

### DESCRIPTION:

This is a clear, liquid, chemical compound that reverses the process that causes rusting and oxidation. It destroys the corrosive agents that support oxidation and leaves a clean, rust-free, phosphatized surface.

In the process of stripping the rust and corrosion away, minute inert elements are formed that become an integral part of the metal surface, without changing tolerances, and prevent further rusting. This process is called phosphatizing. This product can be used on all ferrous and non-ferrous metals. It will completely eliminate paint failures caused by improper cleaning of the metal.

It can also be used on old equipment where paint has come off and rust and other corrosion has taken its place. It will remove the rust and soils and condition the metal for repainting.

### FEATURES

- Non-Flammable
- Retards Future Rusting
- Economical And Easy To Use
- Cleans and Prepares Surface for Painting

### USE AND DIRECTIONS

Wire brush the surface to be treated to remove loose scale. Spray product on surface and allow to remain wet for at least 20 minutes. Reapply if drying occurs in less than recommended contact time. Smaller objects may be immersed in product for same time period.

Wipe or air dry.

### PHYSICAL PROPERTIES

Physical Form:..... Water thin liquid	Specific Gravity: ..... 1.145
Appearance: ..... Clear	pH:..... < 1.0
Color: ..... Clear	Evaporation Rate (Water = 1):..... 1.0
Fragrance: ..... Odorless	Flash Point: ..... None
Water Solubility:..... Complete	U.S.D.A. Category:..... A3

RR:135 - 9901
